

# going green

the westin peachtree plaza hotel is committed to promoting the green campaign throughout its establishment and utilizes practices to minimize the natural resources used in its operation, and protect the environment through conservation.

among initiatives in place are:

- green guest room program which reduces the amount of water and chemical used in our laundry department by reducing the total number of washes completed for linens and terry. this is accomplished by our volunteer linen reuse program in the guestrooms.
- use of an ozone wash system which significantly decreases the amount of hot water and natural gas needed to launder items.
- installation of compact florescent light bulbs wherever practical in the building, reducing the electricity needed to light the hotel.
- implementation of our 'blue program' which has targeted and reduced wasteful water practices and usage by implementing low flow faucets, tap water on request only, substitution of common washing practices for alternative methods.
- utilization of federally certified GS cleaning chemicals with a MSDS rating of 1 or less.
- recycling of materials and waste; paper, cardboard, oil.
